Project Name	Credit Card Approval Prediction
Maximum Marks	2 Marks

Customer Journey Map

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	Stage 1 Application Submission	Stage 2 ML Evaluation & Processing	Stage 3 Decision & Explanations
Actions <i>What does the customer do?</i>	• Navigates to the credit card application portal. • Fills in personal, employment, income, and financial history metrics. • Uploads verification documents and submits the request.	• Waits for real-time automated verification. • Monitors the screen for processing indicators or status updates. • Checks email/SMS for instant system acknowledgment receipt.	• Receives the final automated approval or rejection notification. • Reviews assigned credit limit or reads feedback regarding denial reasons. • Proceeds with digital card activation or follows up on credit advice.
Touchpoint <i>What part of the service do they interact with?</i>	• Web/Mobile application interface. • Digital application form fields and dropdown menus. • Document upload portal widget.	• Processing status screen / interactive loader. • Real-time automated validation status banner. • Automated SMS/Email notification alerts.	• Final results dashboard interface. • Approval/Denial official email letter. • Explainable AI (XAI) feature breakdown window.
Customer Thought <i>What is the customer thinking?</i>	• "Are my personal financial details secure on this server?" • "How long will it take to fill out all this information?" • "Will a hard credit check impact my current score?"	• "Is my data being assessed fairly by the automated algorithm?" • "I hope there are no background server validation errors." • "Will it take days, or will I get an instant decision?"	• "Great, my card is approved! When can I use the virtual card?" • "Why was my application denied? Which metric fell short?" • "How can I adjust my financial habits to pass next time?"

Phase of Journey	Stage 1 Application Submission	Stage 2 ML Evaluation&Processing	Stage 3 Decision & Explanations
Customer Feeling <i>What is the customer feeling?</i>	• Hopeful but cautious about sharing sensitive financial data. • Slightly tedious or overwhelmed by required parameters.	• Anxious, expectant, and impatient for the algorithm's judgment. • Curious about automated financial risk assessment safety.	• Relieved, excited, and validated if the prediction is positive. • Disappointed, confused, or frustrated if rejected without clear reasons.
Process Ownership <i>Who is in the lead on this?</i>	• UI/UX Design and Frontend Engineering Team.	• Data Science & Machine Learning Pipeline Engineers (ML Ops).	• Explainable AI (XAI) Developers & Customer Support Relations.
Oppor tunities <i>How can we improve this stage?</i>	• Integrate secure auto-fill via scanned ID uploads to minimize input effort. • Provide explicit visual indicators explaining data privacy protocols.	• Optimize ML model response latency to achieve real-time inference under 2 seconds. • Incorporate an active progress tracker to maintain transparency.	• Deploy SHAP/LIME metrics to render automated reasons for credit denial clear and actionable. • Offer personalized recommendations for alternative lower-risk cards if rejected.
